

MOHAMED ASKAR ALI

FULL STACK DEVELOPER | REACT.JS | NODE.JS | EXPRESS.JS | MONGODB

Cuddalore, India | +91 63699 12655 | mamohamedaskarali@gmail.com | linkedin.com/in/mohamed-askar-ali

PROFESSIONAL SUMMARY

Results-driven Full Stack Developer with 2+ years of hands-on experience building and maintaining responsive web applications using modern frontend and backend technologies. Proficient in JavaScript, React, Node.js, and Express, with experience in RESTful API development, MongoDB database management, and Git-based version control. Skilled in collaborating with cross-functional teams to deliver scalable, maintainable solutions with a focus on clean code and performance.

PROFESSIONAL EXPERIENCE

Full Stack Developer — Digicognit Pvt Ltd — Villupuram, Tamil Nadu

July 2024 – Present

Low-Code ERP Platform:

Modernized a configurable platform on React 19, NestJS, Fastify, and TypeScript into a modular monolith with reusable frontend components and scalable backend services, adding dynamic form and entity configuration, RBAC, approval workflows, and routing-rule-based workflow automation with audit history.

Built configurable form templates for dynamic ERP forms with custom fields, validations, and layouts, including live template previews for real-time validation during form design; created template views for records as tables, calendars, Kanban boards, and interactive maps with field mapping and record navigation.

Developed secure authentication and account management, including JWT session handling with active-session monitoring and revocation, two-factor authentication, OTP-based password reset, and authorized admin impersonation for troubleshooting user-specific permissions and configuration issues.

Built report, document, and dashboard builders with dynamic fields, chart widgets, PDF generation, and Excel exports; implemented configurable QC workflows, traceability, error management, and Oracle database integration for high-volume data flows; improved responsiveness with Redis caching, BullMQ queues, real-time WebSocket/SSE updates, automated tests, validation, rate limiting, and structured logging.

Multi-Org ERP & Tally:

Built on Next.js 15, React 19, TypeScript, Node.js, Express, and MongoDB, with workflows for sales, purchases, purchase and sales orders, purchase receipts, payable invoices, inventory, stock management, and product and ledger masters.

Implemented bidirectional Tally synchronization for sales, purchases, ledger parties, and stock items with XML voucher generation, validation, retry strategies, sync-status tracking, error dashboards, and duplicate-voucher safeguards; added configurable invoicing and rate-profile logic for taxes, GST ledgers, and transaction totals; delivered organization-aware RBAC, user management, approval workflows, audit logs, in-app notifications, email configuration, and keyboard-shortcut settings; built operational reporting for inventory ledgers, pending orders, stock reports, receivable and payable aging, invoice comparisons, follow-up tracking, discount reports, and party-to-pay reports, with Excel import/export via ExcelJS/XLSX and reusable UI components using Material UI, React Hook Form, Zod, TanStack Query, Zustand, Chart.js/Recharts, and PDF generation.

Digi Facility (Computer Aided Facility Management):

Built end-to-end work-order handling, technician assignment, and progress tracking, with preventive-maintenance scheduling, automated service-request routing, dynamic vendor and client contract templates for SLAs, secure token-based external access with page-level control, and a knowledge base with a smart suggestion engine using React.js, Node.js, Express.js, MongoDB, Mongoose, REST APIs, JWT, GeoJSON, and Socket.IO.

Digicognit Company Website:

Developed a fast, SEO-focused corporate website using Next.js to showcase Digicognit's ERP digitalization, e-invoicing, facility management, task-management, POS, and digital-transformation solutions. Delivered a responsive, mobile-first experience with localized English, Arabic (RTL), and Bahasa Malaysia content for a wider regional audience.

Integrated a Cal.com product-demo booking flow so prospective customers can schedule a consultation directly from the website.

Built a separate mobile-responsive post-management application for creating and publishing website content, enabling faster content updates without developer support. Also developed a guided chatbot journey for product-demo enquiries, helping visitors identify relevant solutions and move smoothly to the demo-booking flow.

CORE SKILLS

Frontend: React.js, Next.js, TypeScript, JavaScript, MUI, TanStack Query, Zustand, Tailwind CSS, Bootstrap, CSS, HTML

Backend: Node.js, Express.js, REST APIs, JWT Authentication, RBAC, Socket.IO, Background Jobs & Queues

Database: MongoDB, Mongoose, Redis

Tools: Git, GitHub, GitLab, GitHub Actions

Languages: Tamil, English, French (Read)

EDUCATION

Siga College of Management and Computer Science, Villupuram

2020 – 2023

Bachelor of Computer Application • CGPA: 7.3
